Project Overview

Target Completion Date:
3/11/2026

Objective

Build a centralized web platform to steamline and automate new employee onboarding.

Expected Deliverable

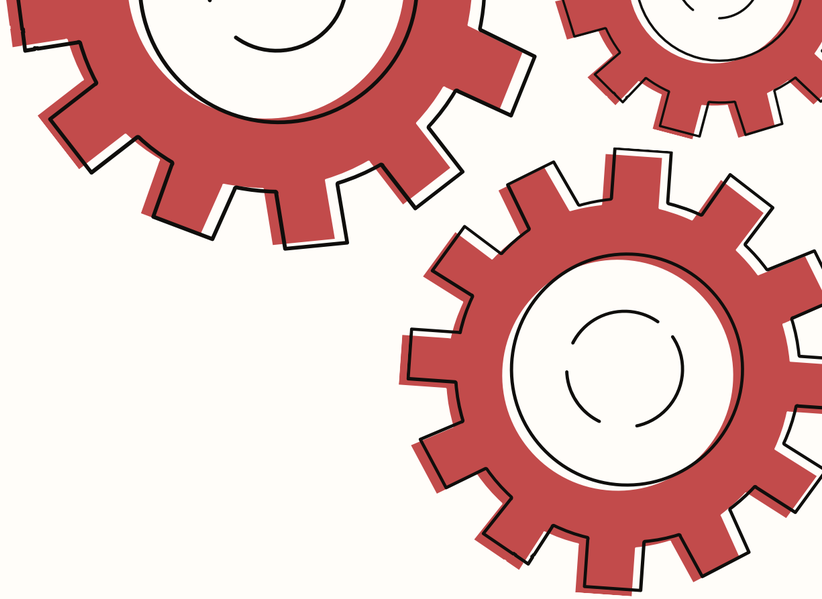

A fully functional Onboarding System web application with admin export tools and automated email notifications.

Roles

End-to-end full-stack development, including core workflows, system rule enforcement, and user dashboard integration.

Scope of Work

- sequential learning paths
- induction content editor
- admin dashboard
- automated progress tracking

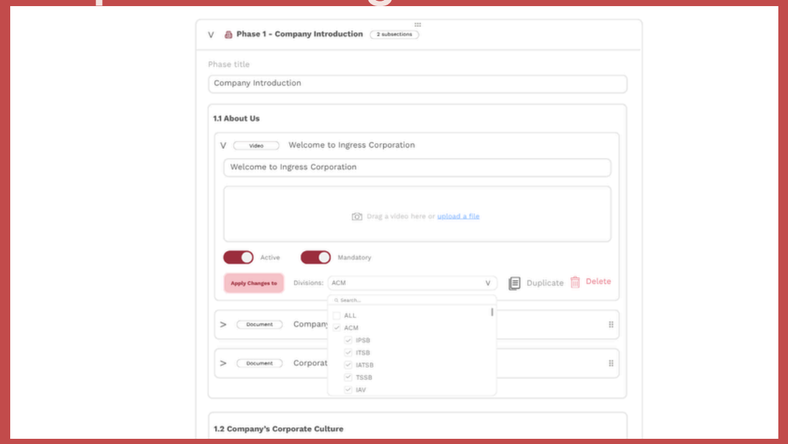

Work Completed Since Last Engagement

Task 1

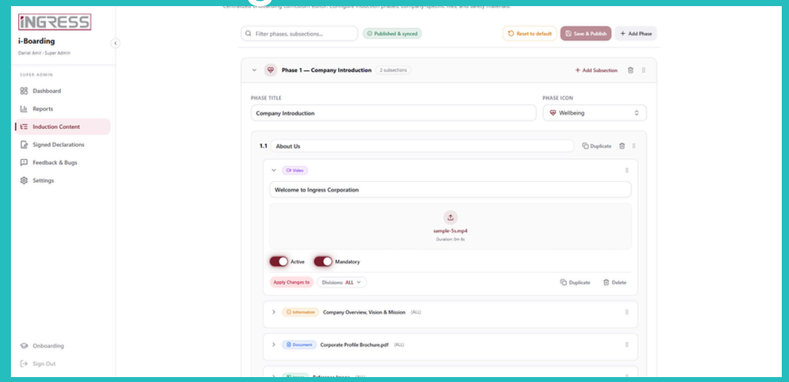

Designed and proposed a more refined user interface for the Induction Content Editor.

Proposed Design

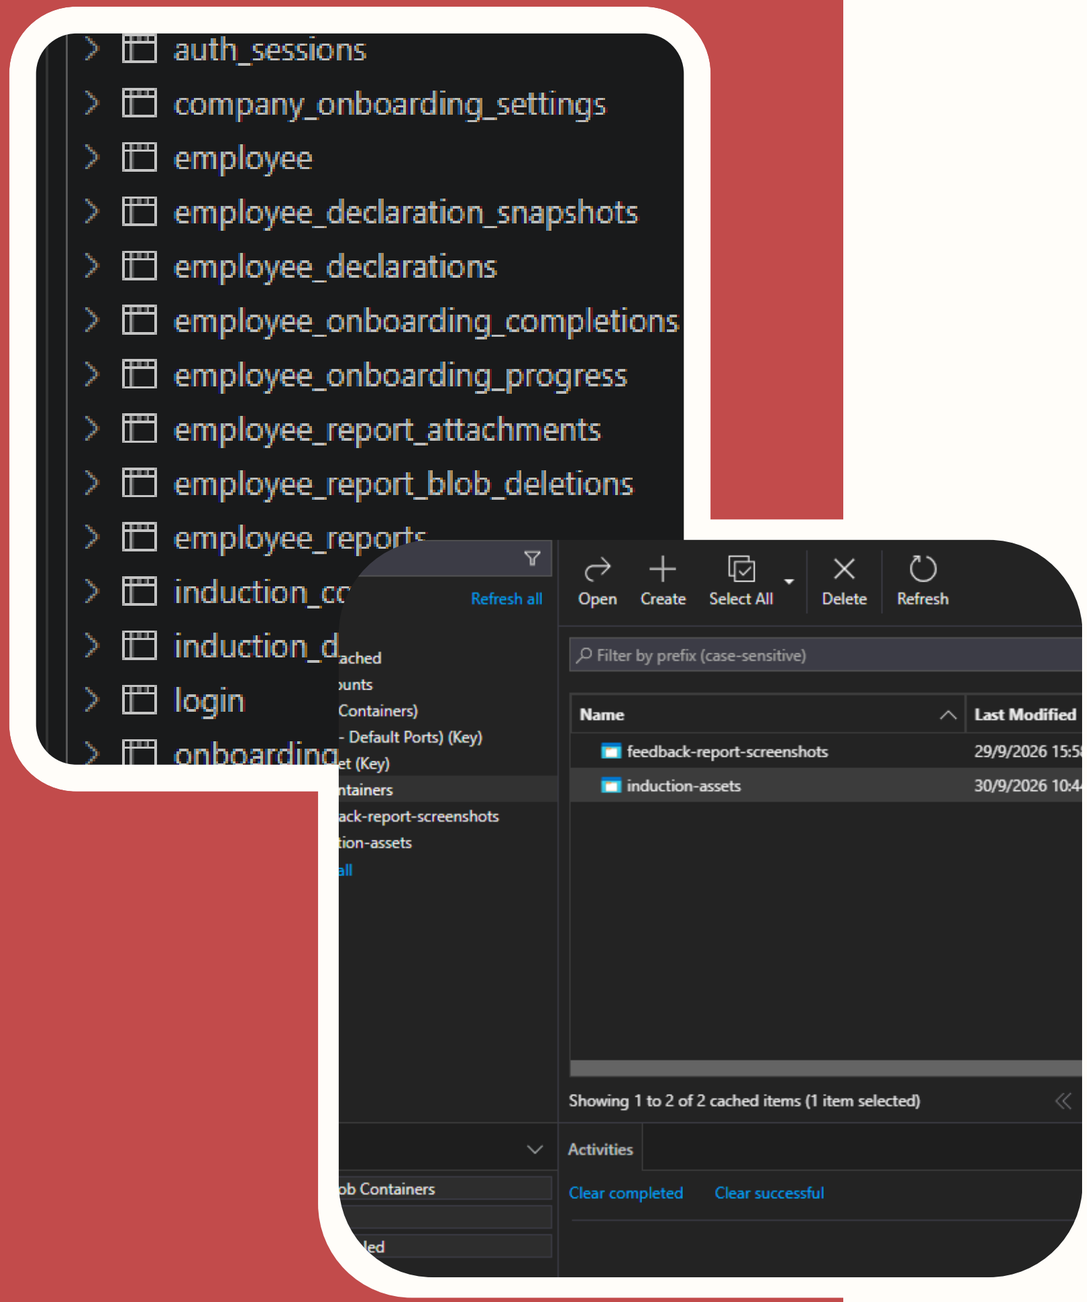

Fully integrated and deployed the redesigned Induction Content Editor.

Final Design

Task 2

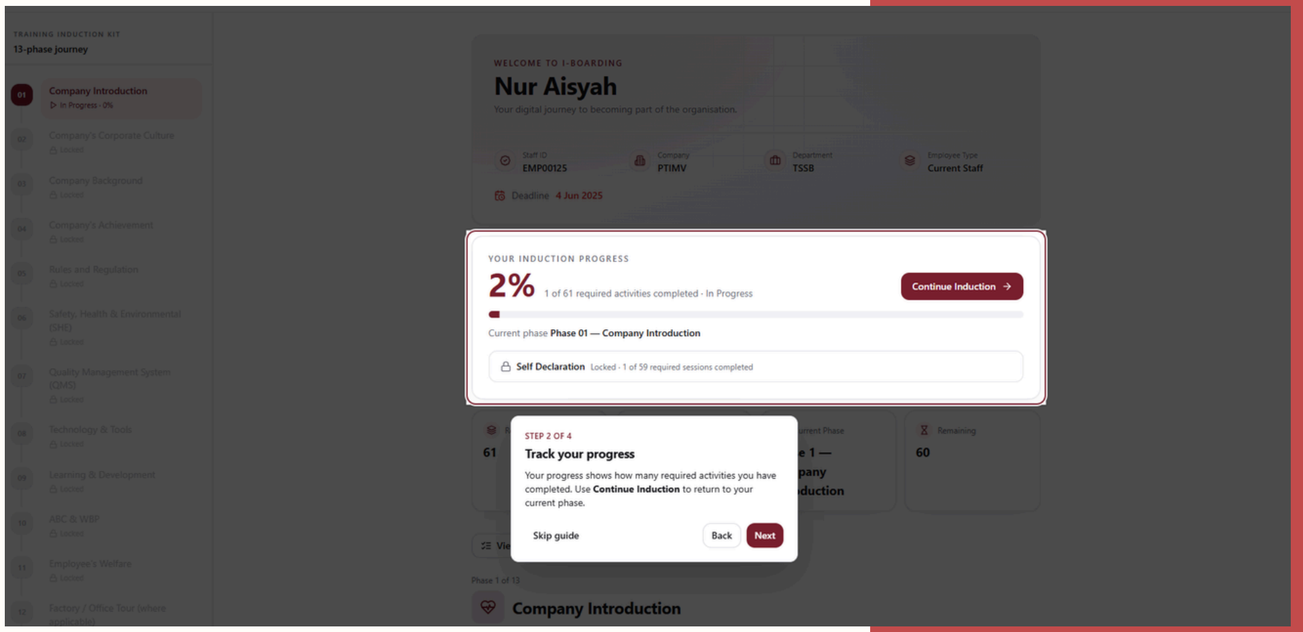

Successfully integrated the system with the database and Azure Cloud Storage to ensure the secure perservation of user information and induction media uploads.

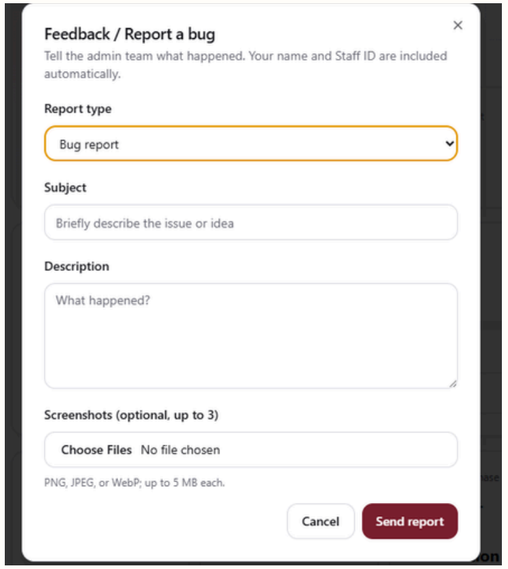

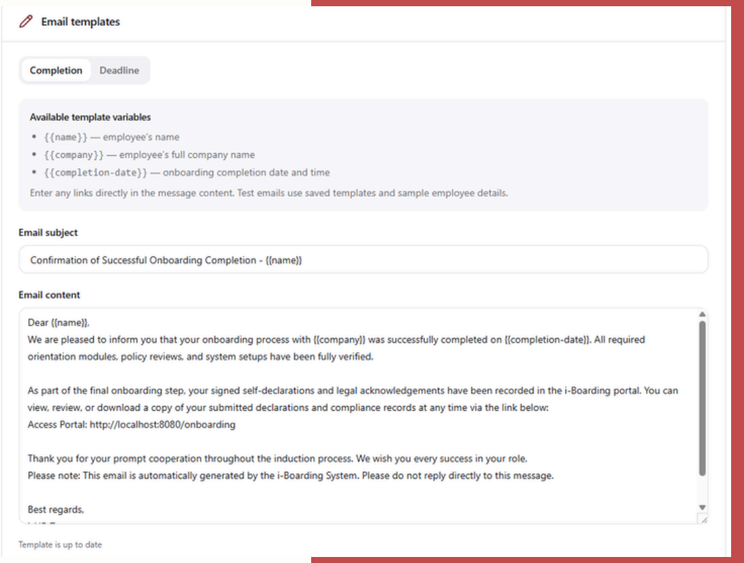

Task 3

Resolved minor system bugs and added additional features across onboarding modules to ensure smoother user progression.

- Email notification system
- Navigation Guide for new user
- Feedback and Bug Report System
- Minor bug fixes and adjustments

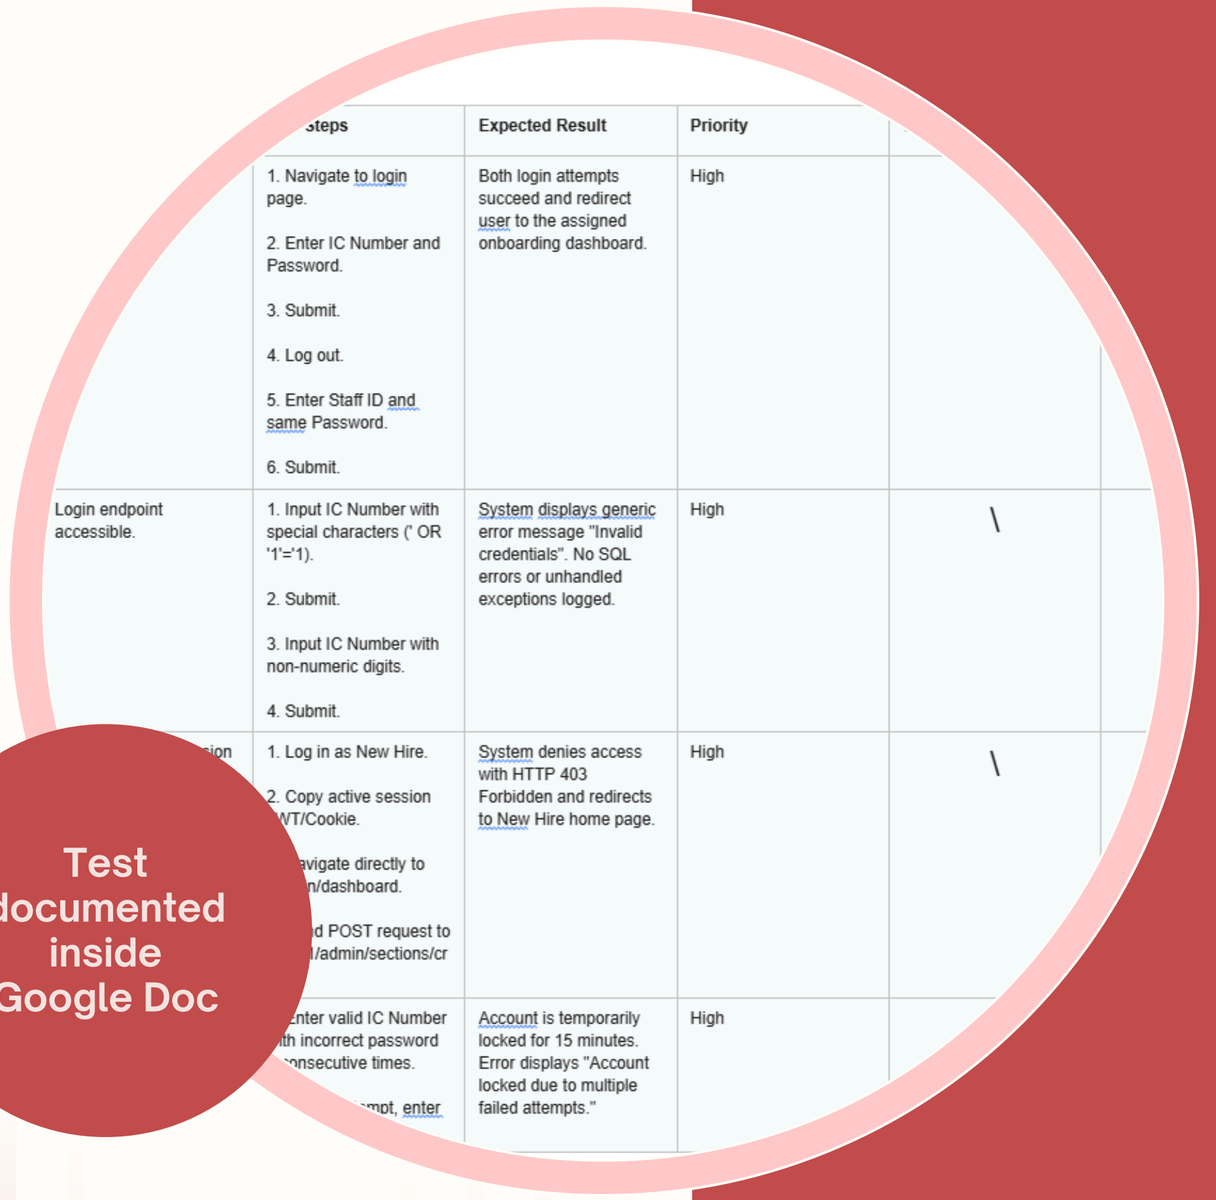

Task 4

Conducted comprehensive system testing and quality assurance protocols.

- Testing on authentication endpoints to prevent SQL injection.
- Ensuring system restricts video scrubbing while retaining pause and volume controls, and requires document sign-off.
- Enables adding, editing, and deleting sections, plus exporting reports in PDF and Excel formats.

	steps	Expected Result	Priority	
	1. Navigate to login page. 2. Enter IC Number and Password. 3. Submit. 4. Log out. 5. Enter Staff ID and same Password. 6. Submit.	Both login attempts succeed and redirect user to the assigned onboarding dashboard.	High	
Login endpoint accessible.	1. Input IC Number with special characters (' OR '1'='1). 2. Submit. 3. Input IC Number with non-numeric digits. 4. Submit.	System displays generic error message "Invalid credentials". No SQL errors or unhandled exceptions logged.	High	\
ion	1. Log in as New Hire. 2. Copy active session WT/Cookie. avigate directly to n/dashboard. d POST request to l/admin/sections/cr	System denies access with HTTP 403 Forbidden and redirects to New Hire home page.	High	\
	nter valid IC Number th incorrect password onsecutive times. mpt, enter	Account is temporarily locked for 15 minutes. Error displays "Account locked due to multiple failed attempts."	High	

Test documented inside Google Doc

INGRESS

Progress Status

What is currently being worked on: Deploying the Onboarding System to the production environment, integrating dual-authentication (IC/Staff ID) with i-HR infrastructure, and running end-to-end verification of production user routing and automated email notification triggers.

Reasons for any variance: none

Key Activities

Developed the i-Boarding employee onboarding journey	Done
Implemented secure access to induction materials and declaration forms	Done
Improved administrator features, including employee management and induction content	Done
Integrated employee and login data with the existing i-HR database	In Progress
Prepare the application for deployment and integration testing	In Progress

INGRESS

Challenges and Issues

Issue:
Integrating i-Boarding with the existing i-HR database and preparing it for deployment.

Impact:
Additional time was needed to check data compatibility and ensure existing employee records were handled correctly.

Root cause:
The prototype needs to work with an existing database structure and external services.

Priority:
High

Action already taken:
Reviewed the database structure, adapted the application to existing data, and prepared the deployment configuration.

Result:
The application is prepared for further integration and deployment testing.

Support required:
Guidance from the IT team on the deployment environment, database access, and required service configuration.

Next action:
Test the application in the intended environment and resolve any integration issues.

Key Learning & Knowledge Gained

Practical Skills Gained:
Developing user interfaces and APIs, testing features and troubleshooting database and application issues.

Technical Knowledge Gained:
React, Node.js and how a web application connects to an existing database.

Problem Solving Experience:
Adapting the application to work with the existing i-HR database while protecting employees' information.

What I can do now independently:
Develop a web application using React and Node.js.

Process Knowledge Gained:
Experience using GitHub for version control, managing project changes and collaborating with multi-developer environment.

Next Steps & Completion Timeline

PLAN 1

Complete remaining features and improvements

Target: 29/10/2026

PLAN 2

Integrate the i-Boarding platform with the i-HR system.

Target: 2/11/2026

PLAN 3

Provide technical maintenance and post-deployment support.

Target: 19/2/2027

Final Deliverable: Completed i-Boarding application — Target: 3/11/2026

Expected Project Completion: 3/11/2026

Next Steps & Completion Timeline

Progress achieved:

Developed the main employee onboarding journey and administrator features.

Most important deliverable completed:

A functional i-Boarding web application prototype.

Main challenge:

Integrating the application with the existing i-HR database.

Key learning:

Gained practical experience developing a web application with React and Node.js, and using GitHub for version control.

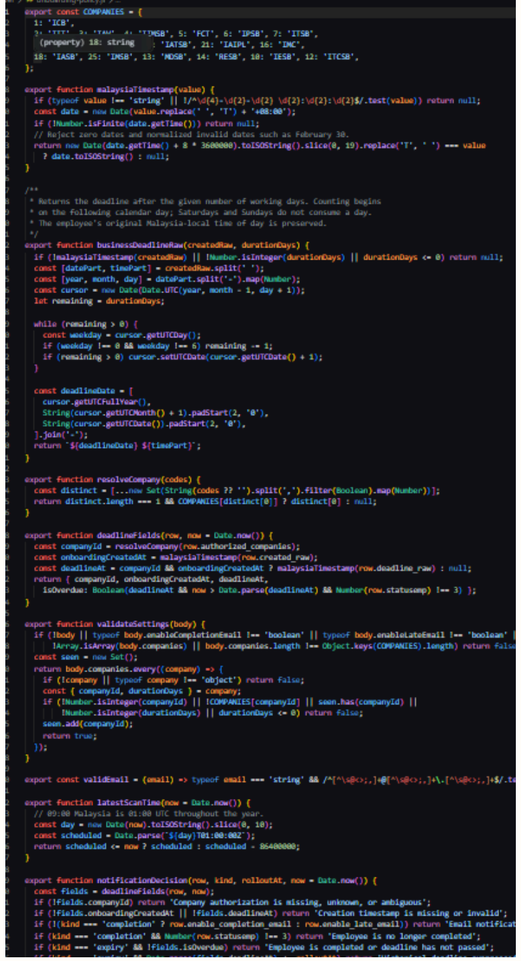

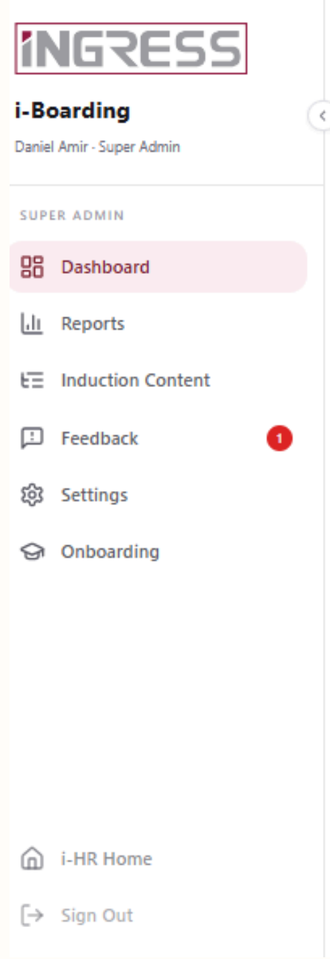

Next milestone:

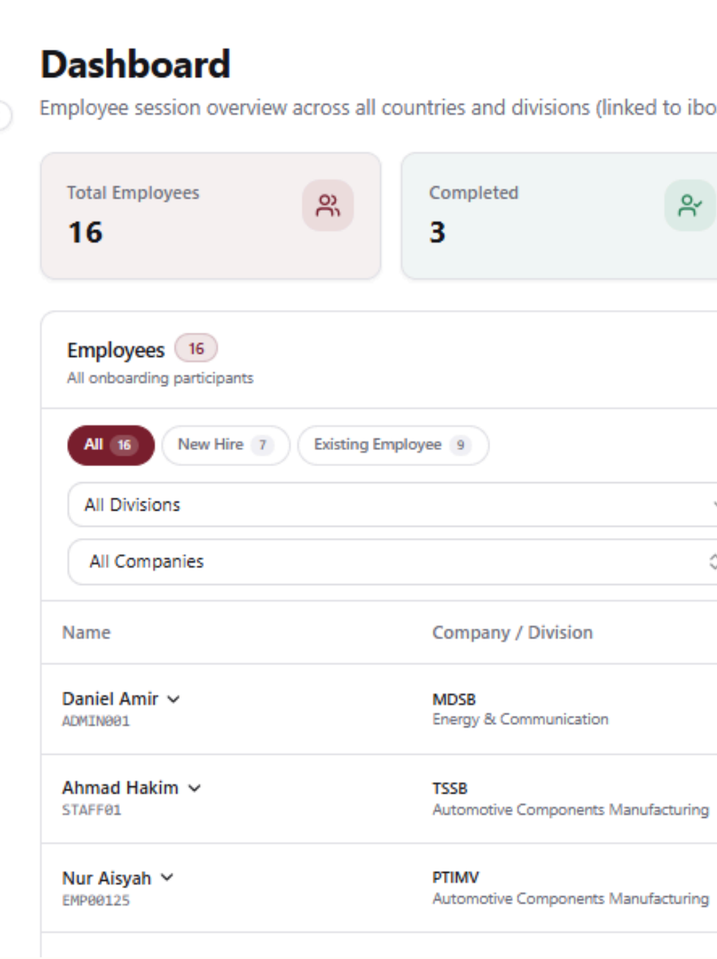

Complete testing, resolve remaining issues, and prepare the application.

Appendix

Evidence & screenshots

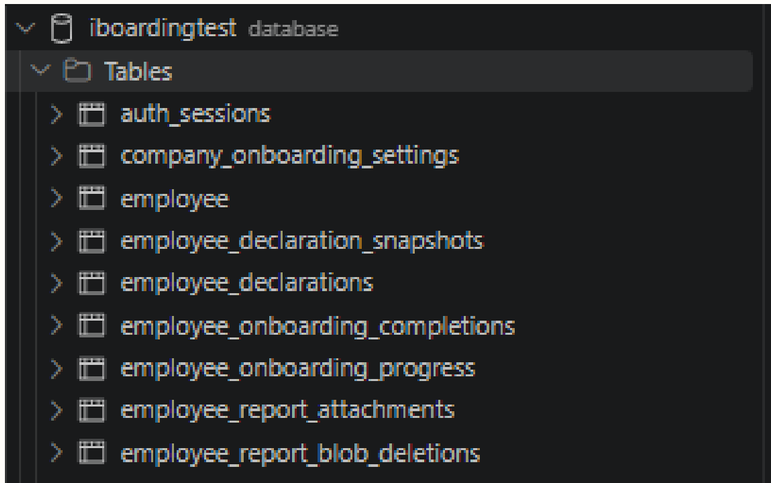

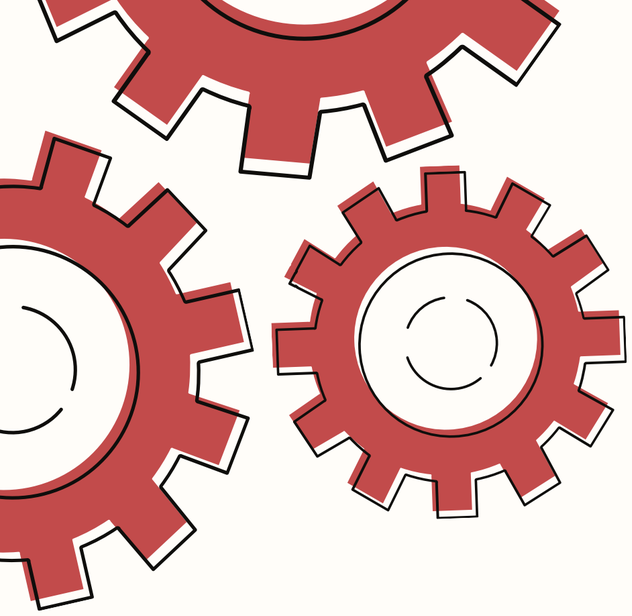

1. Authentication & Role Access Control (AUTH)

e	Test Objective	Preconditions	Test Steps	Expected Result
Login	Verify new hire can log in using valid IC Number or Staff ID along with i-HR Password.	Active user account in database with IC and Staff ID.	1. Navigate to login page. 2. Enter IC Number and Password. 3. Submit. 4. Log out. 5. Enter Staff ID and same Password. 6. Submit.	Both login attempts succeed and redirect user to the assigned onboarding dashboard.
edentials &	Verify system rejects malformed login inputs and SQL injection payloads safely.	Login endpoint accessible.	1. Input IC Number with special characters (' OR '1'='1). 2. Submit.	System displays generic error message "Invalid credentials". No SQL errors or unhandled exceptions logged.

Thank you!
